## **IBAO Members receive Preferred Pricing on their Cyber Insurance**

### **NOT IF, BUT WHEN**

Businesses handling customer data will be confronted with the challenge of a data breach. It is not a matter of “if” but “when”

### **LEAVE IT TO THE EXPERTS**

Arthur J. Gallagher and Beazley partnered to provide a comprehensive cyber program for Insurance Brokers. Better yet, member brokers of IBAO receive preferred pricing over non-members. Because every breach is different, it is important to choose an Insurer that has been there before. Beazley has managed thousands of breaches for companies ranging in size from small to large multinationals across a variety of industries. Beazley has a dedicated team of breach professionals that respond quickly regardless of the time or day. These breach professionals will assist the policyholders at every stage of the incident investigation and breach response. They will coordinate forensic experts and specialized lawyers to help you establish what has been compromised including credit or identity monitoring and will offer public relations advice to help safeguard your reputation

### **RISK MANAGEMENT**

**With Beazley’s in-house risk management portal, [beazleybreacholutions.com](http://beazleybreacholutions.com), you have access to tools and resources that will help you prepare for a cyber-incident. It includes:**

- Guidance on incident response and business continuity planning
- Information on best practices for specific threats like ransomware and business e-mail compromise
- Breach trends and security alerts that provide information that you need to avoid the latest threats based on cyber incidents reported to Beazley every month.
- Beazley Privacy Builder, a toolkit to help you improve your data privacy and security program
- Training for your employees - employees are still one of your biggest risks. As a Beazley policyholder, you will have access to [elearning.beazleybreacholutions.com](http://elearning.beazleybreacholutions.com). On-line training modules that include:
  - Phishing and Malware
  - Ransomware Prevention
  - Mobile and W-Fi Security
  - Identity Theft and Password Security
